FOREWORD

This book is specially prepared for law school students who take economics as a compulsory course. Since, medium of teaching is Turkish at all law schools in Turkey, the method employed in teaching a course in English must be both theoretical and practical. To achieve this goal, my late friend Tümay Ertek and I decided to follow this teaching model in which Turkish and English textbooks are used. This is the reason why I referred to the figures and tables in his popular book, *Basic Economics*. In writing this book, I considered his book, 'Temel Ekonomi' and notes titled 'Economics for Lawyers'. Thus, based on my notes, I completed writing the first edition of this book.

This book comprises three main parts in 21 chapters. The first part includes principles of micro-economics, whereas the second part covers macro-economics and recent issues discussed in economics. The last part is completely devoted to History of Economic Thoughts.

My thanks are due to my niece Melek Şener in editing this book, and my students who read the manuscripts of this work.
